

Challenge

Using the technology of your choice, create a simple web app that allows a seller to showcase their home to potential buyers.

You do not need to do any account logins, management, etc.

The app will be just a single page (for 1 house) that includes:

- General title/short description/price/address/thumbnail of the house
- Has a floorplan of the house as the navigation element
- When you click on a room in the floorplan, the following details are loaded below the plan:
 - Room name
 - Room description
 - Photos of the room
- The page should be responsive for mobile devices
- You can use any assets you wish. We have provided some optional assets to use:
https://drive.google.com/file/d/1NUsYaLeWJA021LqIY-h_LKkULy-rbKNp/view?usp=s
haring
- Bonus points for optimising the app, and explaining optimisations

Process

- Respond acknowledging understanding of the challenge - or ask any clarifying questions
- Before starting, estimate (and report) how long you feel the project will take
- Present (1 hour) the completed project :
 - how long it actually took
 - demonstrate the working app
 - (most important) explain the code and how it works
